

Module 2: Assignment Instructions

Assignments must be completed on your own. Any evidence that students have collaborated on assignments will be considered a violation of the academic honesty code.

Create a web site for your favorite amusement park – real, fictional, past, or future.

The web site will have **4 pages**: a homepage, a page about the rides/attractions available at your park, a page for ride information, and a page to order tickets. The content of each of these pages is described below.

Before you start you will need to find links to **three** websites that are related to the amusement park (such as the actual amusement park's website, or parent company, news about the park, or related parks).

Step 1: Homepage (Filename: index.html – Figure 1):

1. Include a title "LastName: Assign 2"
2. Use headings and paragraph elements to lay out the home page as in Figure1. You **MUST** include:
 - a. A **header** section using h1 elements for the tagline – such as the motto of the website.
 - b. A **navigation** section that includes a link to the homepage and links to each of the three other pages (rides/attractions.html, info.html, and order.html). Add bookmarks that will take the user to the two sections of the home page: Upcoming Events and Related Park News.
 - c. A **main** section that uses horizontal rules, h2, p, and list elements to format this area. Use h2 elements to label each of the following areas, a section as required to contain the data and a horizontal rules to separate the parts.
 - i. An area about the amusement park chosen, including where the park is located, why the park is your favorite, or why the park is deserving of a website dedicated to them.
 - ii. An area for Upcoming Events showing at least 3 events in a numbered list.
 - iii. An area for Related Park News. This section should contain three working hyperlinks to websites that are external to your site. Use a bulleted list.
 - d. A **footer** section that contains a copyright symbol, due date, and an email hyperlink to your GSU email address.

Figure1: index.html page

Step 2: Rides Page (Filename: rides.html – Figure 2)

1. Include a title "LastName: Assign 2"
2. Use headings and paragraph elements to lay out the home page as you did for the home page. You **MUST** include the same **header** section, **navigation** menu, and **footer** as on the home page (including the bookmarks mentioned in part ii above).
3. Use the **main** section to display the following content for the page (about the different rides/attractions):
 - a. Use horizontal rules, an h2 element to label the page as “Park Rides & Attractions”. Use special character code for “&”, and a paragraph to describe this page purpose.
 - b. You must have at least 5 rides/attractions. For each ride, you should include an image, ride/attraction name, and short information about each rides or attraction. Use images you have taken or have found online (via public domain – not copyright images). You will need to use an image editing program to resize the images so that all the images have the same width - reminder: always resize smaller, not larger.

- i. The images must be saved in an “images” folder (to keep them organized).
 - ii. Images must have the same width & descriptive file names. Image1.jpg is not descriptive.
 - iii. Use HTML to put the images on the page – above the H3 for that ride’s name. (figure 2)
- Use an h3 element for the ride/attraction's name and paragraph elements for their description.

Figure2: rides.html page

Step 3: Info Page (Filename: info.html – Figure 3)

1. Include a title "LastName: Assign 2"
2. Use headings and paragraph elements to lay out the home page as you did for the home page. You **MUST** include the same **header** section, **navigation** menu(including the bookmarks mentioned above), and **footer** as on the home page.
3. Use the **main** section to display a horizontal rule, an h2 element with “Ride Information”, and
4. And, **add a table** in main section after the h2 element which has the following specifications:
 - i. This table must be 4 columns wide and at least 6 rows long (one row for the headings and one row for **EACH** of the rides you mentioned on the rides page). Please see figure 3.
 - ii. Your table must include a caption relating to the information in the table – such as “All rides close 10 minutes before the park closes”.
 - iii. Your first row includes the **four heading cells**. You must include a column for the ride’s name. Additional columns headings could be: height restrictions, duration, year opened, length of track, special feature, thrill level, top speed, number of riders per ride, or awards won.
 - iv. Table must use a table data cells for the ride’s name and table data cells for each of that rides’ information. Do not use heading cells for the name. *These should be in the same order as the rides page.*

Figure3: info.html page

Step 4: Order Page (Filename: order.html – Figure 4)

1. Include a title "LastName: Assign 2"
2. Use headings and paragraph elements to lay out the home page as you did for the home page. You **MUST** include the same **header** section, **navigation** menu, and **footer** as on the home page(including the bookmarks mentioned in part ii above).
3. Use the **main** section to display a horizontal rule and an h2 element with "Order Tickets".
4. And **add a Form** after the h2 element that will allow a visitor to order a ticket. *Refer to Figure 4.*
 1. Your form must use the get method to send the form data to the action of **formProcessor.html** (attached to the dropbox, & put file in your folder – you do not need to edit this file).
 2. All form controls must have name and id attributes that make sense to that form control.
3. Use 3 <fieldset> and 3 <legend> to cover the elements below. Add the submit button after the last fieldset with having "Order Ticket!" as its value.
4. Use <label> that are associated correctly with each form control (except submit button).
5. You must use the following information & types of form controls:

Label and/or Value	Type of Element(s)	Additional Attributes?

Name	Text	
Email	Email	
Phone	Tel	
Age	Number	Minimum age cannot be less than 1 , maximum age is not greater than 100
Label and/or Value	Type of Element(s)	Additional Attributes?
Number of Tickets	Select list: must have at least 7 options	First option must be blank. You should have options starting at 1.
How much do you want to donate to the park?	Range	Minimum donation amount cannot be less than 1. Maximum donation amount cannot be greater than 100. Step donation amounts by 3.
Order Add-ons (use imagination)	Checkboxes: must have at least 4 options	Value must be related to the label for that option. Two <u>MUST</u> be pre-checked by default
Label and/or Value	Type of Element(s)	Additional Attributes?
Delivery Date	Date	
Delivery Method (use imagination)	Radio buttons: must have at least 6 options	Value must be related to the label for that option. Only one delivery method may be selected at one time. <u>DO NOT</u> have any option checked by default.

Figure4: order.html page

Step 5: <div> tag

You will need to add one <div> tags to all .html files with the id attribute and contents as described:

1. id=wrapper. The <div> contains the entire contents INSIDE of the <body> tags.
-

Step 6: logo image

Using a photo editing program, CREATE a logo for your park. It must include:

1. The name of the park only (no additional graphics), a transparent background, a text color other than black, and at least one special effect (such as a glow, drop-shadow, stroke, or bevel/emboss).
 2. The logo must be in all of the HTML files and be placed above the h1 element of the tagline in header section.
 3. The logo image must be placed in "images" folder.
-

Step 7: Submission Instructions:

- Place your name, due date and assignment number **in comments** at the top of each page.
- All pages must validate to green status using the W3C Validators. <https://validator.w3.org>
- Submit all files in a folder (*LastName_Assign2*) that is zipped to the Assignment 2 dropbox on Folio.

Assignment Due Date

Check the course schedule to get the assignment due date
