

Module 3: Assignment Instructions

Assignments must be completed on your own. Any evidence that students have collaborated on assignments will be considered a violation of the academic honesty code.

You will be adding styles to the web site that you created in Assignment 2 using an external style sheet called `amuse_styles.css`. Please choose a reasonable color scheme and be consistent with that scheme throughout the site. Look at different color schemes, amusement park websites, or use a color scheme generator (such as from an image or a favorite color); color schemes **CANNOT** come from the class exercises.

Step 1: Update all HTML pages

1. Update the `<title>` tag in all HTML files to be "LastName: Assign3".
 2. Add the link element to all HTML files to connect them to the style sheet.
 3. You will need to make sure these tags are in all HTML files as described:
 - a. `<header>` this goes around the h1 elements and the logo at the top of your pages.
 - b. `<nav>` this goes around the section of links that go to your other pages and bookmark.
 - c. `<main>` this goes around the section of your pages that is the content that changes.
 - d. `<footer>` this goes around the section that includes the copyright date & email link.
 4. Make sure to have the `<div>` tags to all .html files with the id attribute and contents as described:
 - a. `id=wrapper`. The `<div>` contains the entire contents **INSIDE** of the `<body>` tags.
 5. Remove **ONLY** the `hr` tag that is after the nav links on all four html pages.
-

Step 2: External style sheet (**Filename: `amuse_styles.css`**):

Create an external style sheet to do the following:

1. Change the background color of the html to something other than white (color/image/gradient). I used an image in Figure1.
2. The wrapper should center the page content within the browser (**DO NOT** center text). It should also have padding, a border & a background color. Determine a font family stack for the site (cannot use: "Times New Roman" or Arial). The edges of the page content must be rounded.
3. Style **EACH** of the HTML5 structural elements mentioned above in step 1. Each element has at a minimum: padding, different background, and text colors. The header's, nav's, and footer's content should be centered.
4. The nav section has a border on the bottom to separate the nav & main sections.
5. Provide different text styles for each of the h2 and h3. Each must be a different text color from the default color of that section & from each other.
6. `<hr>` elements have a height of at least 6 pixels and have color.
7. Hyperlinks (ones shown in related links area & footer) have a color other than the default blue & purple, and must be different from their section's text colors. Do **not** style the pseudo states.
8. Hyperlinks within the nav must be shown horizontal across the page, centered, rounded, padding, right margin, have color and text properties that distinguish them from the rest of the page, have borders, and not underlined.
9. Hover effect for nav links **ONLY** should change the background and text color. **Do not** provide styles for the active, focus, visited, or link states

10. Make the bullets on the unordered list of index.html a square instead of circular. (see figure 1)
11. The images on the rides page should have border & margin properties. It should float to the left side, and the images should be set off to the side of the ride's information, as in Figure 2.
12. The ride images should line up with their respective name. *You may need to add some HTML.*
13. The table should have border properties & formatted to be centered within the main section.
14. The first row should have a different background & text colors from the rest of the table.
15. The data rows should alternate background & text colors between odd & even rows.
16. Add padding to the heading and data cells to improve readability of the cell's content. Also, make the content of heading and data cells be centered.
17. The caption element must be placed above the table, right aligned, have padding, and a different text color than the table cells & the color for the main section.
18. Apply background properties and padding to the form and format the form to be centered on the page.
19. Apply borders, margins (or padding), backgrounds, & width properties to each of the fieldsets.
20. Apply borders, backgrounds, & padding (or margin) properties to style the legend elements. Also make the borders rounded.
21. Style the form elements to line up and the submit button to be centered below the fieldsets.

Figure1: index.html page after linking to the CSS

Figure2: rides.html page after linking to the CSS file (zoomed out to be able to cover the page entirely)

Figure3: rides.html page after linking to the CSS file (cont.)

Figure4: rides.html page after linking to the CSS file

Figure5: info.html page after linking to the CSS file

Figure6: order.html page after linking to the CSS file

Step 3: Submission Instructions:

- Place your name, due date and assignment number **in comments** at the top of each page.
- All HTML pages must validate to green status using the W3C Validators. <https://validator.w3.org>
- The CSS page must validate to green status using the W3C validator. <https://jigsaw.w3.org/css-validator/>
- Submit all files in a folder (*LastName_Assign3*) that is zipped to the Assignment 2 dropbox on Folio.

Assignment Due Date

Check the course schedule to get the assignment due date
